Analytics SIWG

Rachel Salby

r.salby@Latrobe.edu.au

ANZREG Conference 22nd May

Mission

- to discuss and promote the various uses of analytics in Ex Libris products

- to discuss and promote the use of analytics in 'evidence based librarianship'

- To present to the wider Ex Libris community at IGELU, ELUNA, and other user groups (such as this one).

- to help ensure all relevant product data is available to use within the associated analytics products (for example, all relevant Alma data is available to the OBIEE Alma instance)

- to help ensure data created using Ex Libris products is readily available, ideally via APIs and through publishing / batch export routines so as to enable the use of special processing, such as institutional data warehouses, big data tools, visualisation tools and programming languages

- to encourage and provide some support for groups (geographical or interest based) to hold analytics skills development days

- to maintain close links with the LOD, Interoperability and KBAB SIWGs and their communities

- to coordinate common problems and enhancement requests for the NERS process

- to maintain a repository on Google Drive for sharing information, tips & tricks, discussion, etc

- to establish and maintain a mailing list for announcements and discussion

*What **exactly** the data presented in Analytics products means. Everybody has the experience of not being sure how what is presented in Analytics is derived from what is being presented in Alma/Primo or other source products.*

Case Detail

Edit

Case Number	00338924	**Account Name**	La Trobe University
Status	Closed	**Sub Account**	
Priority	Normal	**Asset**	La Trobe University- Primo
Database Collection		**Affected Environment**	Primo MT APAC01 - Production

Case Updates

Description Information

Title   Primo Analytics query

Description

Hi all,

We are interested in generating some Primo usage statistics based on ip. My understanding is that it is not possible to filter/limit by ip in Primo Analytics. Could you please confirm if this is the case and if it is offer any suggestions as to how we may be able to gather this sort of statistic.

Thanks,
Lynette
