# Some fundamentals to address

1. ExLibris searching or build standalone ?
  - Do we have Resources to do it ?
2. What does what ?
  - DZN single quick search
  - Source Providers for advanced searching
3. Determine a technology framework: Modular, scalable and compatible
4. Design a UI framework. Public input comes later.
5. Design a culture of iterative design and constant testing

**Meta data specialist**   **Applications support**   **Content writer**

**Usability tester**   **Functional tester**

**Web development - in house, sustainable, collaborative, capability development**  
**The changing face of librarianship**

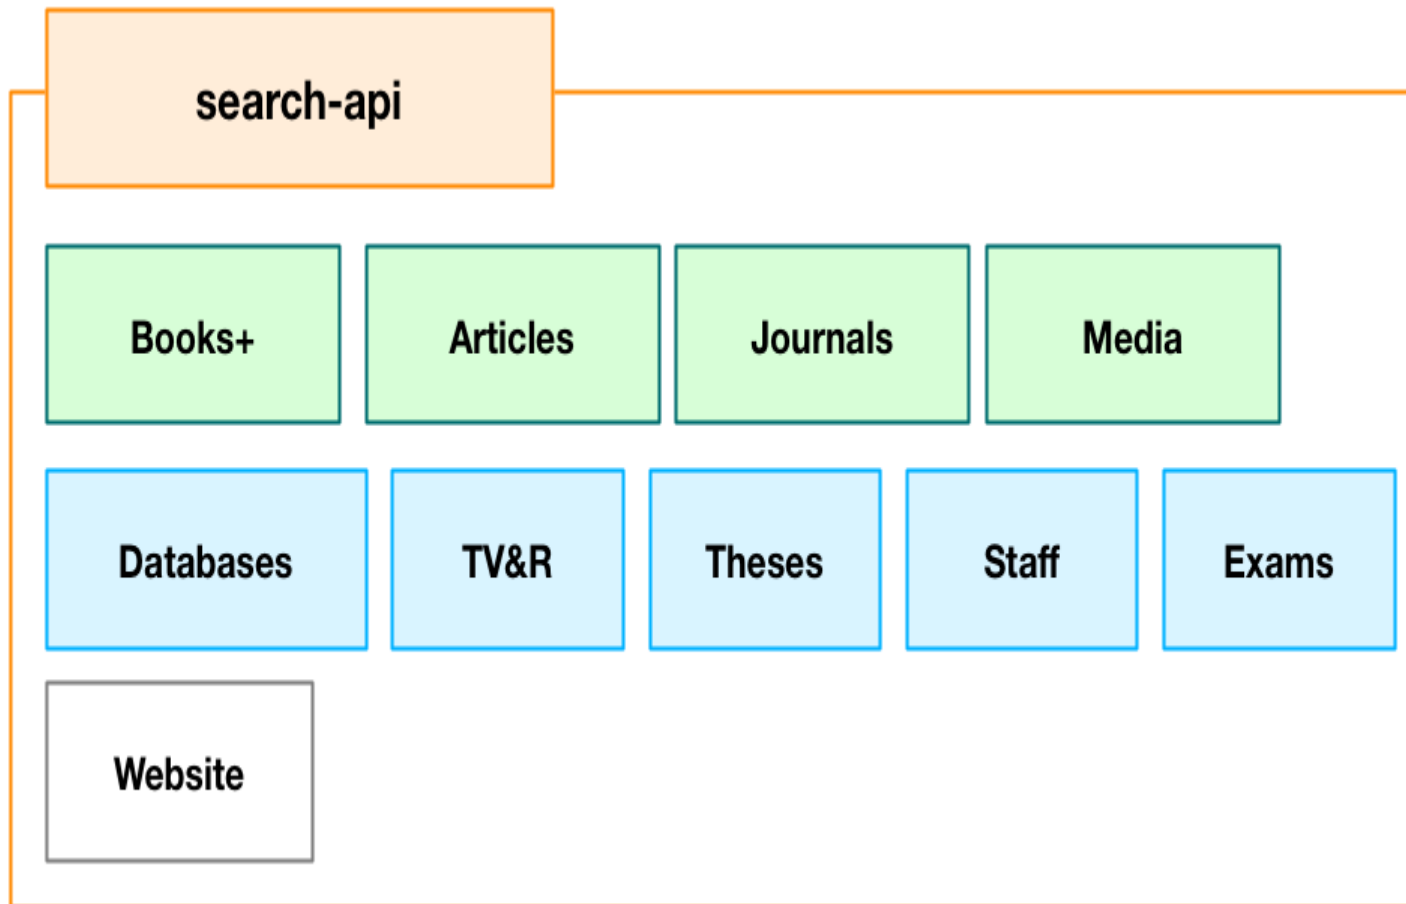

# The Secret Sauce

We use an API, just not That API

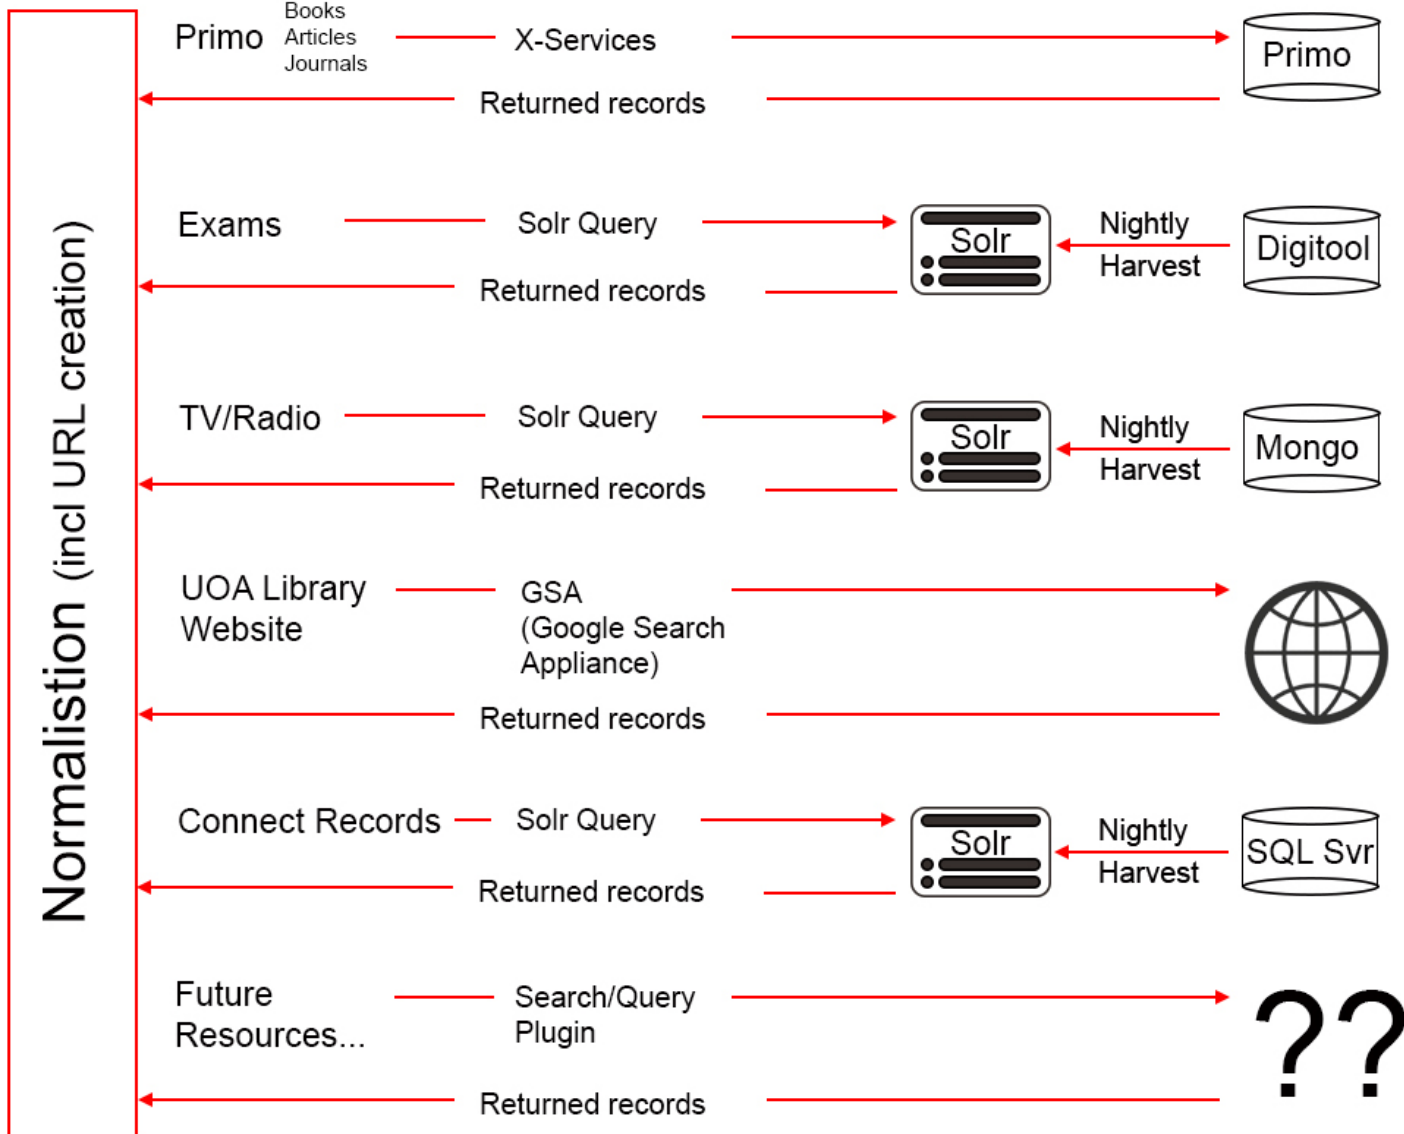

```
server.js =
app.post('/', function(req, res){
  //console.log(req.body);
  console.log('post');
  if (req.body) {
    console.log(req.body);
    if (req.body.From && req.body.From === '+1612 [REDACTED]') {
      var textBody = req.body.Body;
      if (textBody) {
        var words = textBody.toLowerCase().split(' ');
        console.log(words);
        var thermostatIndex = words.indexOf('thermostat');
        var bedroomIndex = words.indexOf('bedroom');
        if (thermostatIndex > -1) {
          for(var xx = thermostatIndex; xx < words.length; xx++) {
            if (words[xx] && isNaN(words[xx])) {
              var setPoint = words[xx];
              console.log('setting temp to ' + setPoint);
              makeIndigoRequest('thermostat', 'setpointHeat=' + setPoint);
              break;
            }
          }
        }
        if (bedroomIndex > -1) {
          //figure out which bedroom appliance.
          var fanIndex = words.indexOf('fan');
          if (fanIndex > bedroomIndex) {
            if (words.indexOf('on') > 0) {
              console.log('Turning bedroom fan on. ');
              makeIndigoRequest('Bedroom%20Fan', 'isOn=1');
            }
            else if (words.indexOf('off') > 0) {
              console.log('Turning bedroom fan off. ');
              makeIndigoRequest('Bedroom%20Fan', 'isOn=0');
            }
          }
        }
      }
    }
  }
  res.send('<?xml version="1.0" encoding="UTF-8" ?><Response></Response>');
  //res.end();
});
var port = process.env.PORT || 3000;
```

# Online feedback

1. The design enables me to easily find what I am looking for:

				
Strongly disagree	Disagree	Neutral	Agree	Strongly agree
<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

**Our first feedback ...**

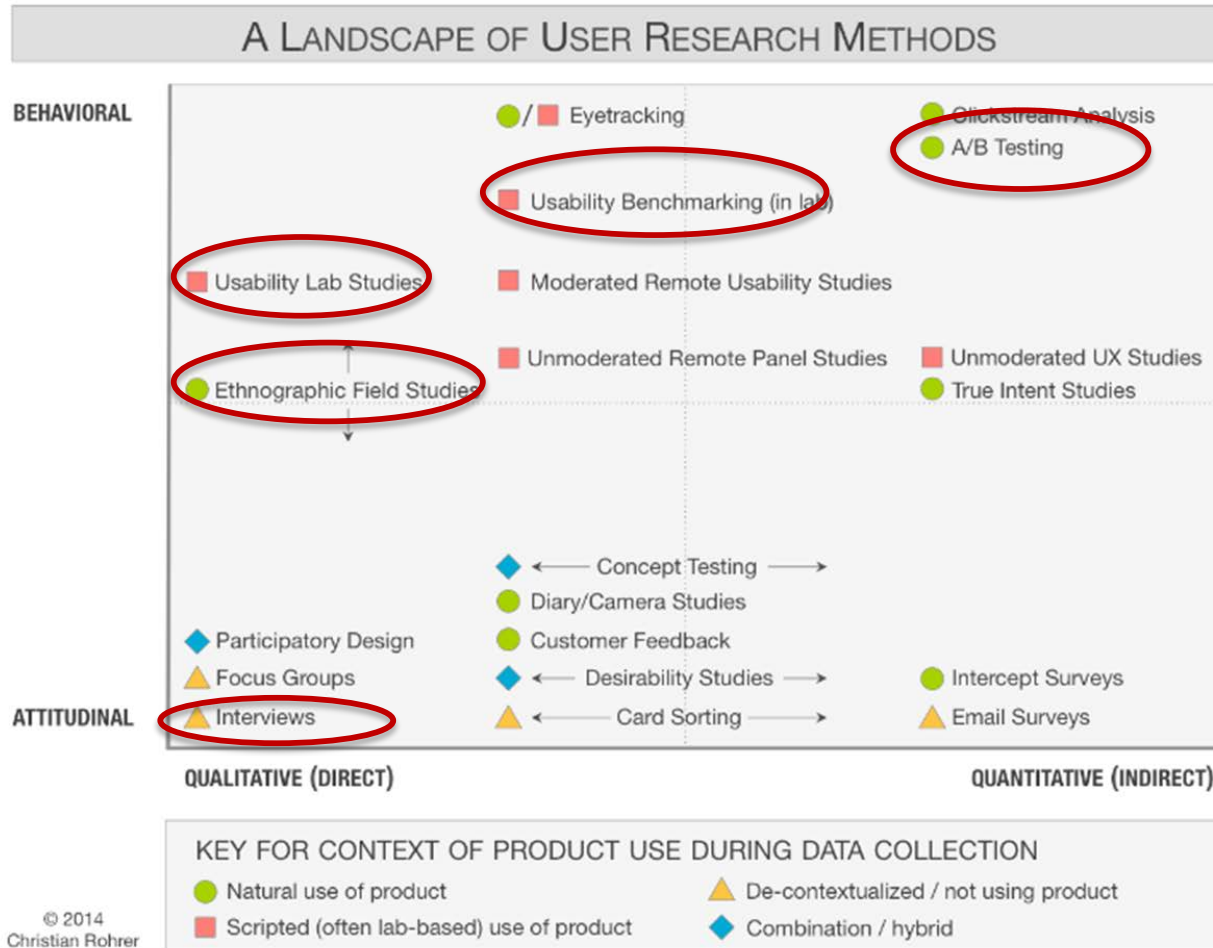

**“I can’t find the e-journals/database list!” Doctoral student**

**“Make this navigable instead of searchable” External user**

**“Dear Librarians, Can I ask why do you keep changing your website? I can no longer easily find access to databases and will probably need to physically go to the library to be shown how”.**

**Academic staff member**

# User research – our Customer obsession\*

## Theory – Rohrer’s quadrant

Reference Rohrer, C. (2014).  
 When to use which user-experience research methods.  
 Retrieved from  
<https://www.nngroup.com/articles/which-ux-research-methods/>

\*Gerry McGovern

# Pop up usability testing

Reaches across audiences

Playful

Low commitment threshold

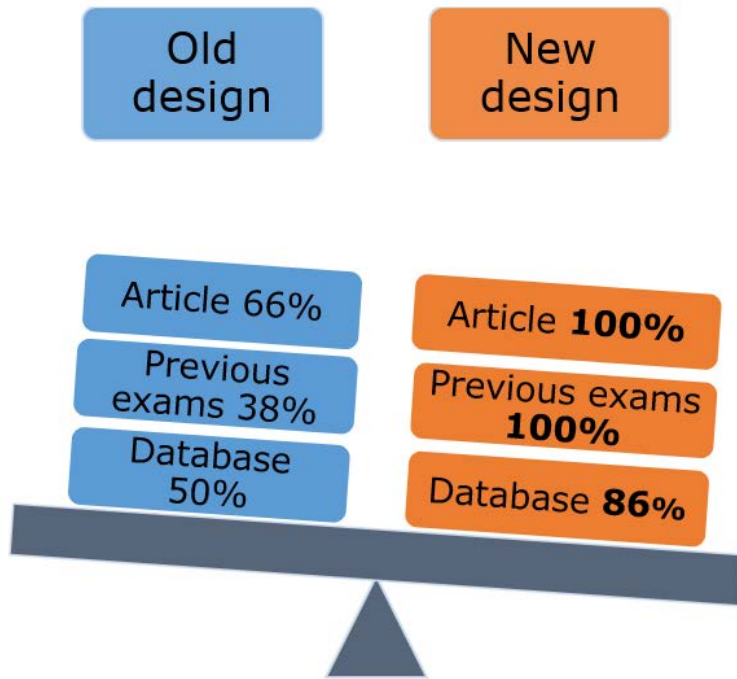

Same day findings to designer

What users **do**  
Behavioural  
Scripted

# Early findings

- **Promotions** gaining greater engagement.
- **Specific items, exams, service content** easily found.
- New pathways to access **databases**.
- Unclear **scopes** – Search Everything and Study/Research.
- **Design elements** may not be seen – drop down menus, More product directory, boosted searches.
- Closer **scrutiny** of activity and behaviours on the site ... and **meta data** clean up.

where to next?

What does it mean when 2 billion people can find your history, your culture, but it is **invisible** from your Library's search box?

make it personal

# Risks and rewards

- Risk: Maintainability. Can we support an expanding and more complex system
- Reward: Customized product offering
- Risk: Can we keep up with changing technology ?
- Reward: Quick adoption time
- Reward: Added Redundancy. If website down then individual sources are still up.
