QuickFind Facts

What is QuickFind?

A single starting point for finding items in print and electronic form from [UNSW Library's](#) collection.

How is it different to the [Catalogue \(LRD\)](#) and [Sirius](#)?

QuickFind has different search features that allow you to refine your searching more quickly and to limit by "available" and "online" resources.

All items from the [Catalogue \(LRD\)](#) and [MyCourse](#) are searchable, as well as a selected group of databases from [Sirius](#).

Good parts

- Collaborative, cross library group doing design, testing, customising
- New products and new technologies for better online services
- Ready to go forward
- Data familiarity and checking documentation

Not so good parts

- Priority juggling during a busy time
- New product means immature processes:
 - Service packs
 - Another set of service pack procedures and documentation
 - Coordinating product upgrades
 - Changes not applied to all servers: NFS configurations, backup package permissions
- Data familiarity and checking documentation

Performance

- At **10.5 seconds** ... 8 databases
 - Medline Business Source Premier
 - Expanded Academic APAFT
 - Journals@Ovid CAB
 - Scopus OmniFile
- At **18 seconds** ... a further 9 databases
