

How we are working in the
Community Zone :
linking, adding to CZ records

ANZREG Alma Best Practice Day 2016

Jenny Quilliam

University of
South Australia

What this means at UniSA:

- Much much more linking than adding... eBooks as a matter of routine with some exceptions...
- Upgrading records especially ebooks
- Correcting records – wrongly linked ebook editions; incorrectly described ejournals
- Contributing at the collection level e.g. ClickView streaming videos (soon...)

Who does the work?

- *Acquisitions Monographs team*
- *Metadata Services team*
- *Digital Resources & Licensing Librarian*

The work is undertaken by staff in acquisitions and the metadata services team.

Who is working in the CZ?

The screenshot shows the 'Advanced Search' interface with the following details:

- Advanced Search:** Search bar with 'Find All titles' and 'Add conditions' button. Filter: 'Contributed By' with 'Contains Keywords' operator.
- Repository Search:** Current search: 'All Titles where All Titles (Contributed By contains keywords *)'. Results: 1-20 of 14,553 Records.
- Search Results:**
 - Value chain management**

 - Journal (3789)
 - More (2) *
 - Language
 - Afrikaans (2)
 - Arabic (1)
 - Acetic (2)

The 'Contributed By' operator in repository search in the Community tab is used to query for contributing libraries. As at early January, there were ca. 14.5K records contributed by organisations. Now 15,956 records

Narrowing down to institutions, there are

475 records UniSA

The top 10 contributors

University of Adelaide	3,558
Oregon Health & Science	840
University of Manitoba	730
Virginia Commonwealth University	656
Eastern Oregon University	602
University of Idaho	556
University of South Australia	475
Western Sydney University	413
Queensland Health	368
Imperial College London	340

In early Jan, we had contributed 475, now up to 523

CZ are lost when everyone has to load metadata.

Did we really contribute this record?

There were some puzzling aspects to the 'Contributed by' attribution happens...

Issues

- *Regarding the contribution of local fields to the Community Zone, bibliographic record 9XX fields, in general, are contributed to the Community Zone. However, in the case where a Network Zone member working on a shared bibliographic record uses the Add Local Fields option in the MD Editor to add local fields, those local fields are not contributed to the Community Zone.*
- *On the Roadmap ?*
- *Suggestion: Could Ex Libris enable all Alma libraries with the Add Local Field option?*

University of
South Australia

Local MARC fields 59X, 69X and 9XX are designed to be institution specific, and not shared into bibliographic utilities

Libraries often use local MARC fields to record institution-specific details (ISD) information and this information is non-shareable. Currently if we need to record ISD information, we need to make a local copy of the record.

Hence any other upgrades made to the record do not benefit the CZ and conversely upgrades to the CZ record do not benefit libraries who have needed to create a local version of the record.

It is my understanding from participation in the CZ Advisory Group that this functionality was on the roadmap , please advise whether this is still the case?

Issues:

Over contribution

- *Updating a CZ record with sensitive local information*
- *We had contributed / modified 23 records with our 904 username/password credentials on show to the Alma community. So we'll need a local record with our 904*
- *Resolution: Unlink the CZ record, create local record with 904 details linked to the existing portfolio, and edit the CZ record to delete the 904 field.*

Over contribution – again the issue of local fields not being local.

For those pesky eresources that do not have IP authentication, but instead force you to use a user name and password to access, we have a solution in place using a local 904 field to store this info. Users are prompted to login and can then access the final URL, user name and password

Issues

How can we contribute a new bib with portfolio to an existing CZ collection?

- *Use case: Library hosts an Open Journal Systems instance, and when new journals are launched, we would like to catalogue the title and add the bib + portfolio to the UniSA Library OJS CZ collection*
- *Workaround: Add portfolio to a designated free journals collection*
- *SF case 00192441 – outcome: a record was added to the CZ but not our fully catalogued version, but just a minimal CZ record*

With the 'Contribute portfolios to the CZ' functionality we can contribute new portfolios to existing selected electronic collections. However there are only 4 CZ collections where you can contribute directly: Free eJournals, Miscellaneous eJournals, US Gov Docs and Miscellaneous Free eBooks.

The knowledge centre advises of two methods to link standalone portfolios to the community zone – to keep our bib info, but enable the CKB linking information. What are the steps?

1 - Use the "Link to Community" button, available for standalone records, in a repository search on Electronic Portfolio

2 - Add the Standalone portfolios to a Local Collection > link it to a CZ Collection > select "Link to Community"

Neither of these two options achieve what we wanted to do which is to contribute a full catalogue record to a CZ collection – but the CZ collection is not one of the collections for which you can contribute bib data.

Issues:

Not updating an incorrect CZ record BUT creating a local copy

- *Use case: The CZ record described a journal issued as CDROMs but linked to the online version*
- *Problem: The CZ record was duplicated and updated to describe the online version; linked to the CZ collection – BUT the original incorrect CZ record remains in the CZ.*
- *Resolution: Unlink the local record, delete the bib and upgrade the CZ record*

For those of us who've worked in Libraries Australia, changing the format description of an existing bib record this has been very much a no no. However with CZ records, we know that these are for online resources and that the journal format being described as cd-roms was incorrect
