

ELUNA 2015

Minneapolis, 4-8 May 2015

Joanne Rowan

Feedback on the PWG licensing report

- The PWG on licensing has been working with Ex Libris to add more functionality to the licensing area.
- In 2015 they will introduce the ability to link to closed and cancelled orders, link to multi POs, add locally defined terms and create local controlled vocabulary.
- In 2016 interoperable with group settings for electronic inventory, read only roles, and the functionality to export from the license tab using tools will be included.
- Areas that require further discussion with Ex Libris are around adding local fields, incorporating licensing into the physical workflow, distinguishing between different types of licenses, flexibility in how license terms are discoverable, adding terms and reordering in the terms tab.

Community zone

- Problems with keeping information up to date
- Contributing portfolios and electronic collections
- ISSN and linking
- Future collaborations with ebook publishers

Serials predictive check-in

- PO line information
- 853 field in the holdings
- Next predicted item's information

Using Marcos to work in Alma

- University of Washington testing a couple of Marcos products
- Selenium IDE 2.50
- AutoHotkey
- Response times

Personal insights

- Good networking opportunity with other libraries and members of Ex Libris's support teams.
- Everyone is experiencing similar problems with Alma and is trying to get answers to the same questions.
- Look for presentations that discuss areas you want to learn more about, but already have some basic knowledge of.
