Primo Working Group Report
Annette Schryver

ANZREG 2018

PWG Members

Lauren Ajamie
Hesburgh Libraries, University of Notre Dame, USA

Knut Anton Bøckman
Royal Library, Denmark

Rachel Collier-Wilson
University of Sheffield, UK

Boaz Dotan
University of Haifa, Israel

Christian Hänger
Mannheim University Library, Germany

Lee Houghton
University of Nottingham, UK

Bettina Kaldenberg
Mannheim University Library, Germany

Ulrich Leodolter
Austrian Library Network and Service Ltd, Austria

Annette Schryver
Macquarie University, Australia

Stacey van Groll
University of Queensland, Australia

Wei Xuan
University of Manitoba, Canada

NERS

- The NERS enhancement process remains a core activity and a focus for collaboration between the IGeLU and ELUNA Working Groups

- Preparing the ballot, deduping and clarifying the enhancement suggestions is a valuable but time-consuming process and requires the work of a dedicated and knowledgeable team

NERS – Primo / Alma

- The enhancement process was tweaked this year to align with the Alma enhancement process and allow easy transfer of enhancement requests between the two where required – each year's process is reviewed once complete to improve efficiency and transparency wherever possible

NERS

- The top voting results are currently with Ex Libris for pointing, but there may be the need for a second round of voting

Other topics

- Close collaboration with Ex Libris Product Management on various issues including
  - QA processes for software releases
  - new UI performance issues
  - downtime incidents and the response to them
  - Primo VE functionality

Primo VE

- The PWG will expand to ensure Primo VE customers are represented

- Workshop to be held in Jerusalem in October 2018 to look at VE normalisation logic, and a developer's workshop on Primo Studio

Primo Studio

- PWG members contributed to development work and testing around the creation of the forthcoming Primo Studio (previously Primo Apps Store)
