

Widening our circles

Linked data, MARC, and the transformation of
library metadata

Nancy Lorimer
Stanford University Libraries
ANZREG 2020

*The world enriched with library data;
libraries enriched with the world's data.*

LD4 Community Vision Statement

What About MARC?

- *The MARC formats are standards for the representation and communication of bibliographic and related information in machine-readable form.* (<https://www.loc.gov/marc/>)
 - Developed in the 1960s by Henriette Avram for the Library of Congress as a metadata transmission standard for library metadata
 - 1971—became the standard for dissemination of bibliographic data in the US
 - By 1973—became an IOS standard
 - Several “flavours” have come and go
 - Currently MARC21 and UNIMARC dominate

L'Étranger. Eng.

Camus, Albert, 1913-1960.

The stranger; translated from the French by Stuart Gilbert. New York, Vintage Books, 1954 [1946]

154 p. 19 cm. (A Vintage book, K-2)

BIBFRAME 2.0

MARC vs Linked Data

Linked Data

- Data elements are linked together as independent statements and not tied to a record format
- Identifiers are URIs
- Relationships are expressed as triples in the form of URIS
- Triples are machine-actionable
- Entity-based descriptions combined through relationships defined by an ontology
- Links can be made to other linked data repositories

MARC

- Data elements are linked together by the context of the database record
- Identifiers are text strings
- Relationships are expressed in free text notes, or controlled text strings & require human interpretation
- Not machine-readable or –actionable
- Combines description of works, expressions, manifestations, events
- MARC databases are silos—they cannot make use of outside metadata

What BIBFRAME is and is not

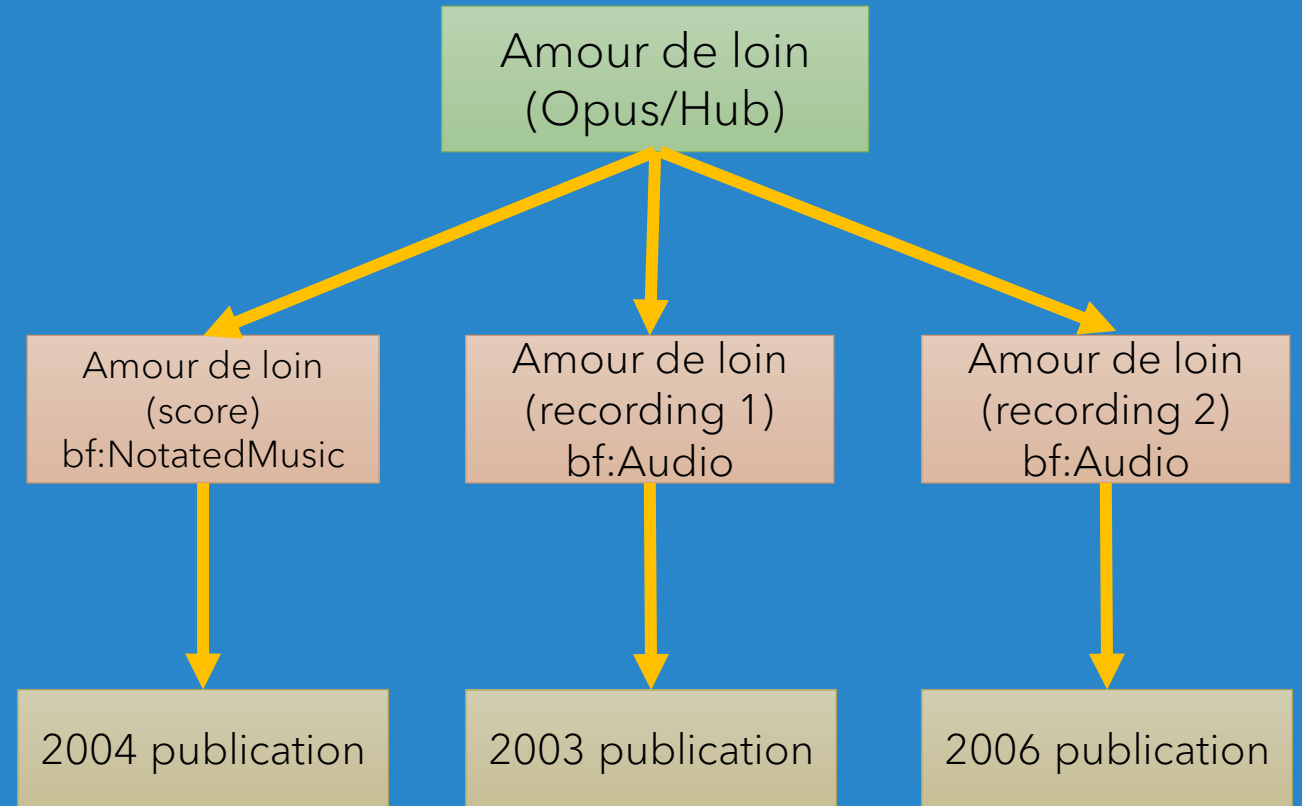

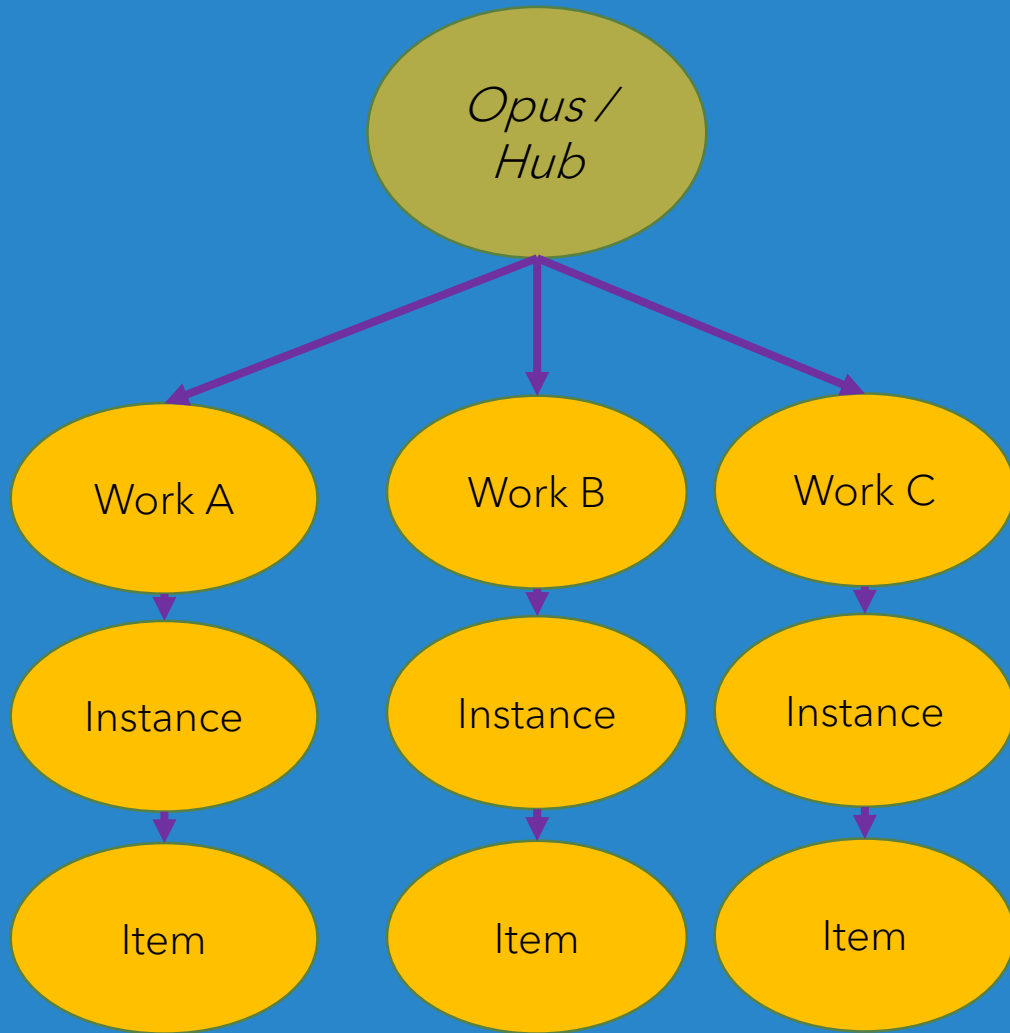

Is...

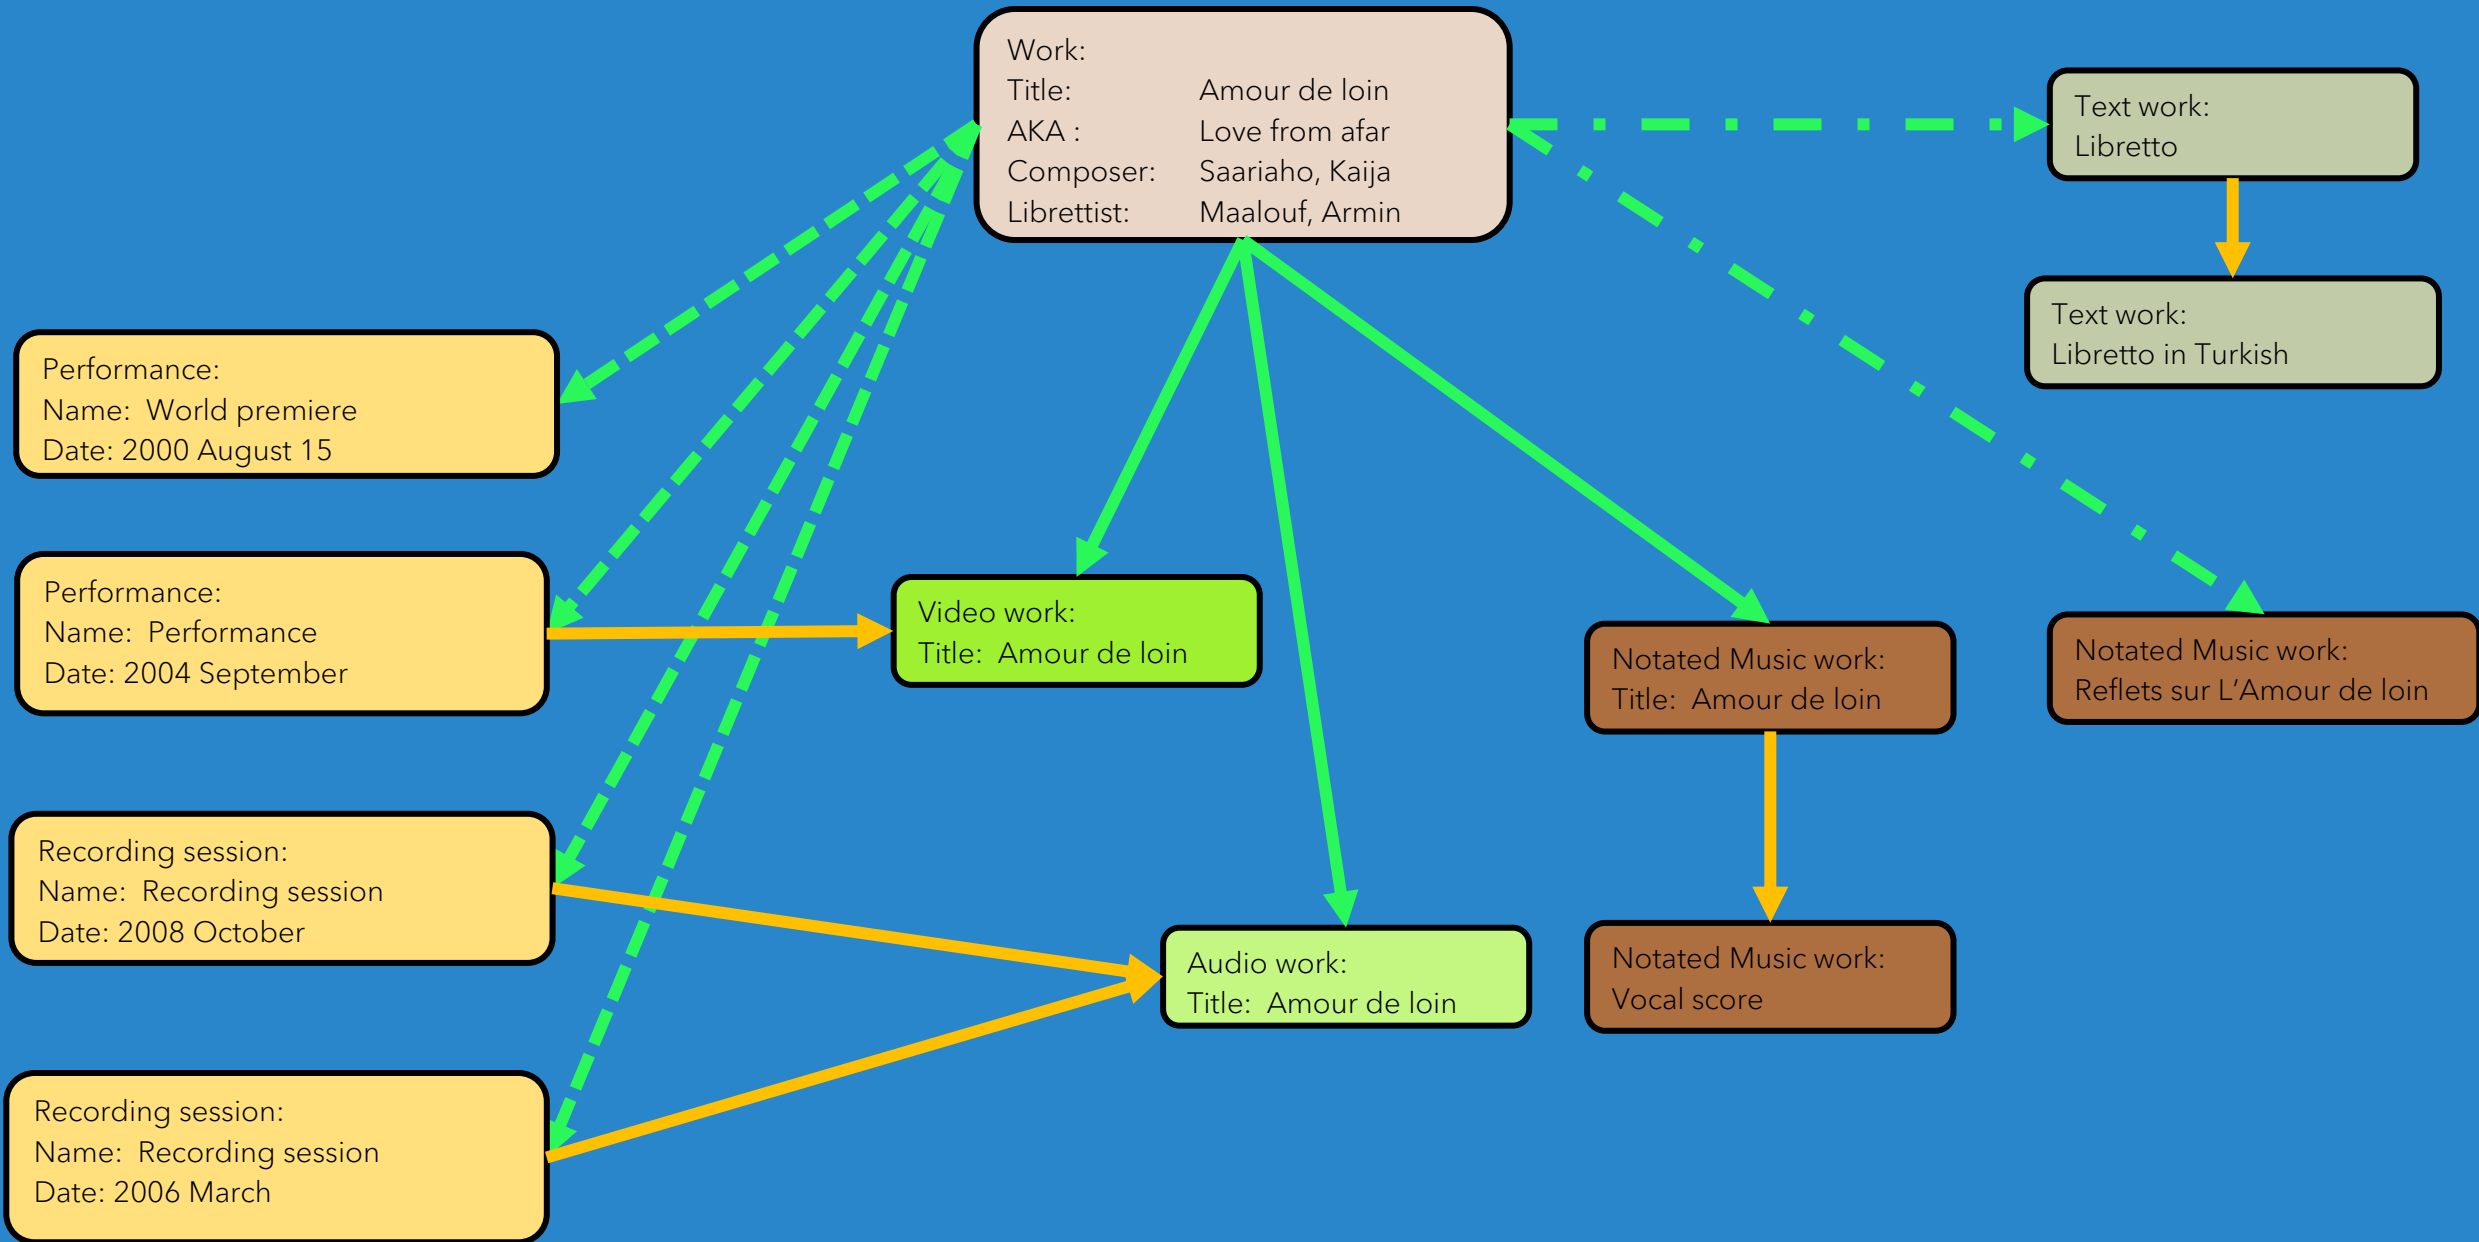

- “an initiative to evolve bibliographic description standards to a linked data model”
- a “core” ontology that covers the basics of bibliographic description as currently conceived
- a successor to MARC for cataloging
- a common framework for the creation of linked data by the library community

Is NOT...

- a “replacement” for MARC
- a one-stop shop for linked data creation
 - requires additional vocabularies
 - requires extensions for domains
- your only choice...
 - linked data is all about choice!

Manipulating the Model (1)

Adding another level to BIBFRAME
“Opus” or “Hub”

Manipulating the Model (2)

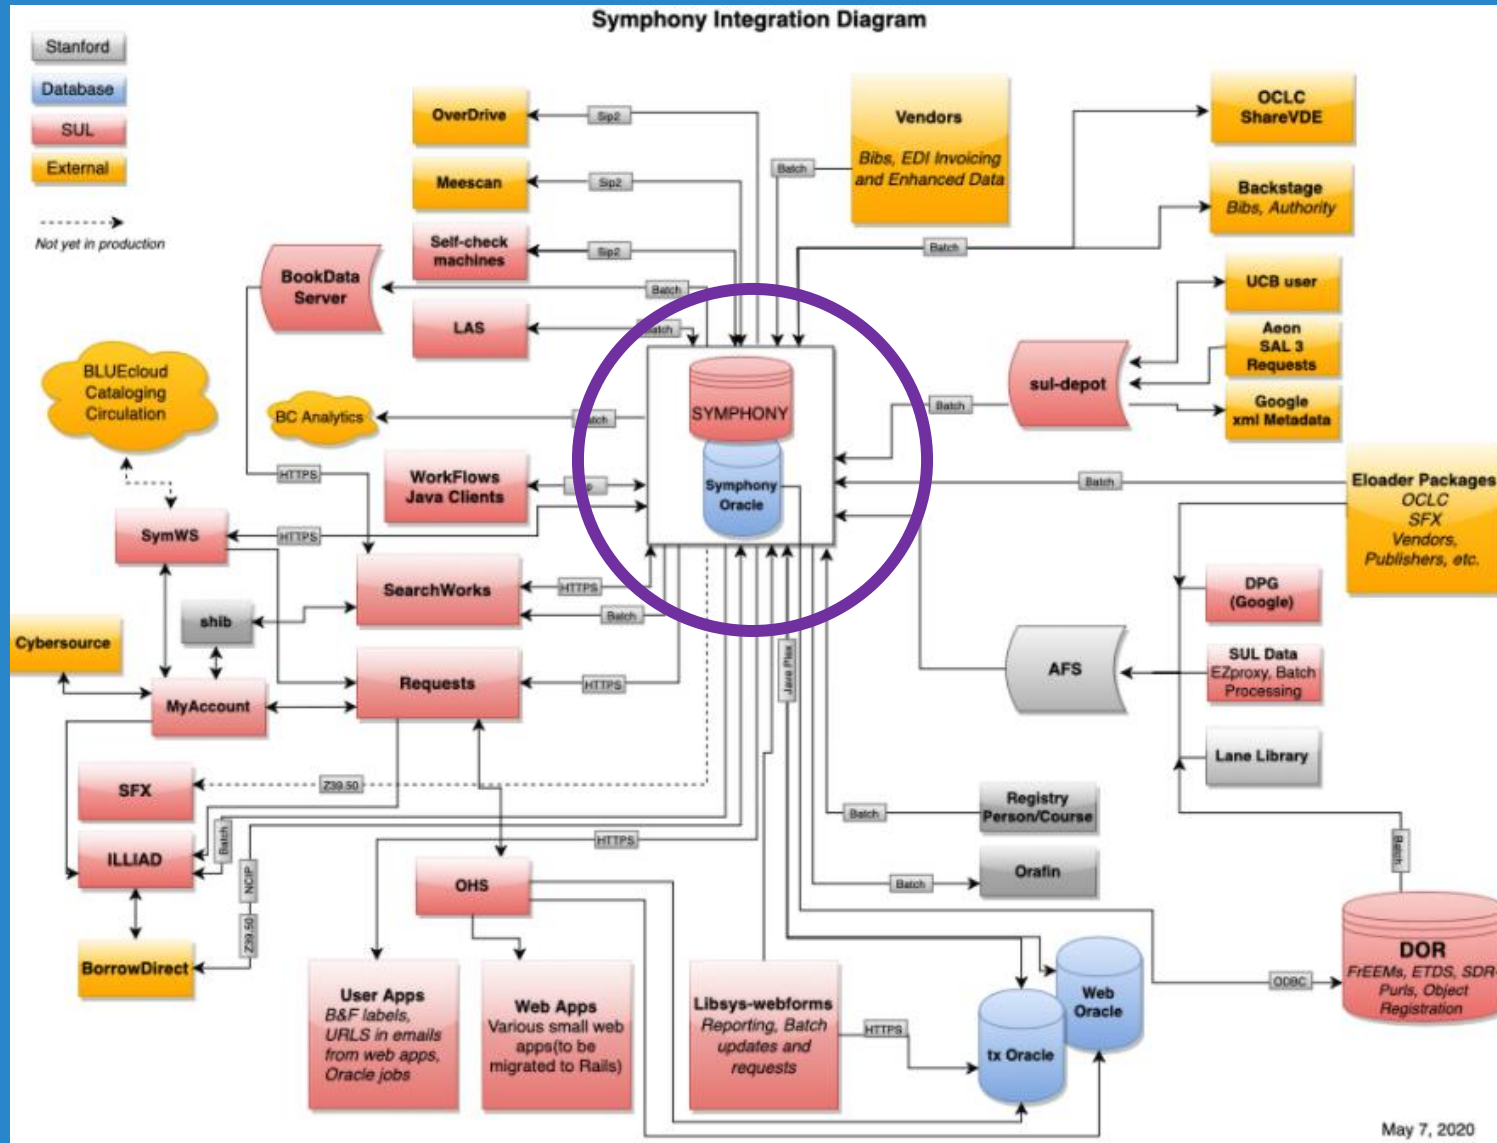

Extending the model

- BF extensions for specific domains
 - Art & Rare Materials Ontology
 - Performed Music Ontology
- Working in other data stores & referring to through BF
 - Program for Cooperative Cataloging Wikidata & ISNI pilots

Tools for a Linked Data Infrastructure

- An Ontology (BIBFRAME, RDA)
- An ILS
- MARC to BIBFRAME converter
- BIBFRAME to MARC converter
- RDF Editor
- Application Profile(s)
- Reconciliation & Entity Management Service

The ILS +

Converters

- MARC to BIBFRAME
 - Legacy data in our systems is in the MARC format
 - We will continue to receive MARC records for a long time to come
 - Conversion of single records and in bulk
- BIBFRAME to MARC or local format
 - Some ILS functions may require MARC data to operate for some time to come
 - Linking order & financial data
 - Local holding and circulation information
 - Connections to other automatic inputs

Reconciliation Services

- Take local URIs and match them to more broadly recognized URIs, e.g., VIAF, ISNI, Wikidata
- Can enhance your data with further data as specified
- Resembles a pumped-up authority service

Challenges

- Changing is HARD!
 - Deeply embedded infrastructures to change
 - “Disruptive innovation”
- A mixed environment creates its own challenges
 - Hard to move beyond MARC influences when you still need it
 - Discovery is more difficult
- Interoperability
 - BF is a very flexible ontology; some need for core modeling agreements
 - There will always be different flavours as we extend our data beyond the core
- ILS & Discovery
 - Many of our discovery systems are very MARC-dependent & will take time to change
 - Cataloging tools & data ingest need to allow for variations beyond a core BF to be brought into our discovery layers

Opportunities

- Enrichment of our metadata from other sources of our choice
- Sharing our own metadata with other libraries & the world
- Flexible modeling that can adapt to differing worldviews while retaining interoperability at a certain level
- Meaningful library connections with non-library LD repositories
- A dynamic presence in metadata on the Web

INSTEAD OF RISKING ANYTHING NEW,
LET'S PLAY IT SAFE BY CONTINUING OUR
SLOW DECLINE INTO OBSOLESCENCE.
